Topics course on Limited Commitment Models

Moritz Kuhn

Spring 2013

In this class, we study the theory and quantitative applications of limited commitment models. We will focus in particular on limited commitment models in financial and labor markets. The plan is to have one paper presented and discussed each week. Depending on the number of participants each student will probably do two or three presentations. Active participation in the discussion in each week is expected. A non-exhaustive list of papers that can be presented is below. The chapter in Ljungqvist and Sargent (2012) provides a good starting point to learn about the literature.
